

CHAPTER 4: FROM PILOT TO ENTERPRISE

How BankUnited turns AI experiments into enterprise capability.

WEB/WORK: SAME INTERFACE, DIFFERENT SECURITY ENVELOPE.

Purpose: Explain the distinction between Microsoft 365 Copilot Work mode and Web mode for BankUnited employees in a regulated banking environment.

The green shield protects the conversation — it does not make Bing a vault.

If you would not type it into Google, do not type it into Web mode.

THE PILOT-TO-ENTERPRISE MOMENT

Pilot proves possibility. Enterprise proves capability.

Enterprise adoption is a system.

WHY PILOTS FAIL

REGULATION IS A DESIGN CONSTRAINT.

The goal is not less governance
— it is proportional governance.

COPILOT AS THE IMPLEMENTATION PLATFORM

How BankUnited deploys AI securely within its enterprise.

GRAPH AND WORK IQ

Microsoft Graph is the connective tissue of work;
Work IQ is the context layer that makes Copilot useful.

Graph = connective tissue
Work IQ = applied context

RISK FRAMEWORKS: FOUR RISKS, FOUR CONTROLS

Named risk. Named controls.

BU AI CoE: THE SCALING FUNCTION

Concept: The BankUnited AI Center of Excellence is a lightweight **coordination** structure, **not a bureaucracy**, that helps AI scale across departments with shared governance, shared learning, and **shared standards**.

"The CoE makes AI work repeatable."

THE ECONOMICS OF SCALING

make the AI investment case through time savings, revenue impact, and the cost of inaction.

hours recovered + better client work + avoided lag = investment case

Waiting is the most expensive strategy.

THE AI ADOPTION ONE-PAGER

AI Adoption Worksheet - BankUnited Workflow Plan

1) Workflow

Identify Process → Analyze Data → Automate Steps → Review Output

2) Current State

Manual data entry, high volume, repetitive tasks.
~40 hours/week per team.

3) AI-Assisted Future State

AI Copilot drafts reports, automates data extraction.
Est. 50% efficiency gain. 

4) Metrics

- Process time reduction (%)
- Error rate decrease (%)
- Employee satisfaction score (NPS)
- Cost savings (USD)

5) Risks + Controls

RISKS: Data privacy, model bias, over-reliance.

CONTROLS: Human-in-the-loop review, BankUnited data governance, strict access controls, performance monitoring.

Signature: _____ Date: _____ Review in 90 days.

Idea

Measured Action

Showcase Project seed

"If you cannot name the workflow, you cannot scale the transformation."

THE REGULATORY SELF-CHECK

Simple decision tree for BankUnited employees to determine if an AI workflow is in the low-risk productivity fast lane or requires formal review.

Disciplined users move faster.

THE 90-DAY SCALE CADENCE

Show a clear 30-60-90 cadence for turning AI pilots into measured learning and Showcase Projects at BankUnited.

Transformation is a cadence of proof.

Thank You: Build the Enterprise Pattern

Thank
you ↙

Energetic action checklist:

- Read Chapter 4

- Build your One-Pager

- Pressure-test with Copilot

- Ensure controls

- Share the pattern

From Pilot → Enterprise Pattern

Do not just create a prompt —
create a pattern BankUnited can trust.
